INTRODUCTION

This project **Travel Website** has been developed on HTML, CSS and javaScript. The main object of developing this project was to create a static website for travel, from which user can get the complete details of the tour and travel, package, booking, such as about the hospitals , contact details, address, images etc. This project is in HTML and CSS so it's a static website and does not perform any type of dynamic database operations. The object of this project is to develop a system that automates the processes and activities of a travel agency. In this project we will make an easier task of searching places and for booking trains, flights or buses. In the present system a customer has a approach various agencies to find details of places and to book tickets.

This often requires a lot of time and effort. We provide approach skills to critically examine how a tourist visits and its ability to operate in an appropriate way when dealing with the consequences of tourism, locally, regionally, and nationally including visitor security and ecological influences. It is tedious for a customer to plan particular journey and have it executed properly. project 'Tours and Travels Management System' developed to replace the currently existing system, helps in keeping records of the customer details of destination as well as payment received.

- Though “travel” might seem like a relatively straightforward category, there are tons of different types of sites that fall under this umbrella.
- And the design elements you need depend on the type of site you’re running.
- After all, the goals of an official tourism site for a city or country are very different from those of a travel blogger or tour company.
- So as you read through this post, keep in mind that not all of the recommendations will apply to your site.
- Each design element is intended to accomplish a specific goal. It’s up to you to know what your goals are, then use that information to make informed decisions about each page on your site.

But in general, the ideal travel website should include a mix of the following:

- High-quality photography
- A brief summary of the area, with highlights of important places
- Hotel recommendations with web links to hotel and booking sites
- Information about recreation and outdoor activities
- Guides to arts and culture, including museums, theaters, and other attractions
- Packing tips
- Maps and guides
- Public transport information
- Airport information
- Relevant tips on language and local dialect
- Of course, your site likely won't need to include all of the elements on this list.
-

Objectives

This application is developed to provide best travelling services to the customers and travel agents. We have developed tours and travel management system to provide a search platform where a tourist can find their tour places according to their choices.

This system also helps to promote responsible and interesting tourism so that people can enjoy their holidays at their favorable places. This system also helps to develop tourism with different cultures so that they enrich the tourism experience and build pride. We develop this system to create and promote forms of tourism that provide healthy interaction opportunities for tourists and locals and increase better understanding of different cultures, customs, lifestyles, traditional knowledge and beliefs.

This system also provide a better way to connect with various events. This system also gives tours related information like which places are tourist attractions, cities, and provinces. Tourist can also get the Map and navigation system and temperature and weather information. Tourist can also book tours through our tours and travels management system. This system also keeps a history of visited places of its users.

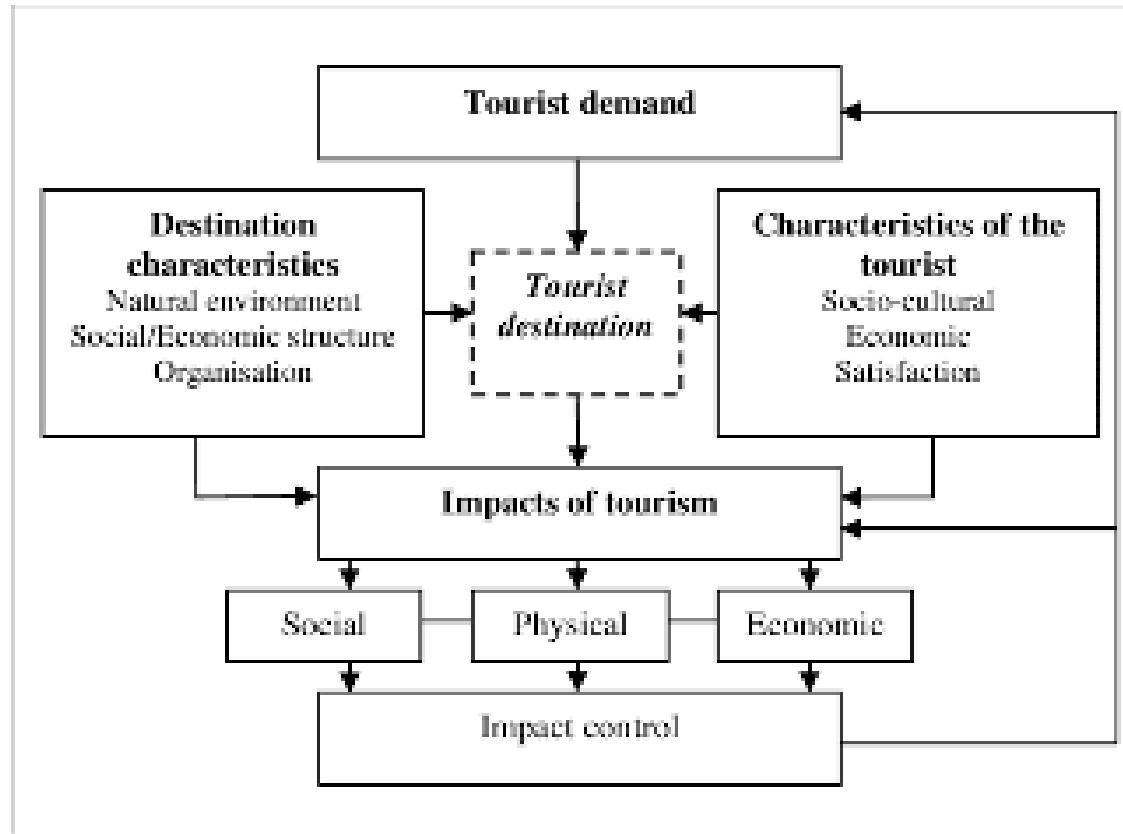

MODULES

- **Home Page:** This project contains the basic information about the travel system.
- **About Page:** It contains all about the travel system information and their working.
- **Gallery Pages:** This part contain all images about travel.
- **Register Page:** Here user can easily resister on the travel website and conformation message will be displayed after registering.
- **Contact Page:** User can submit their contact details on the travel website.
- **Login:** User can log in on the travel website.
- **Forgot Password:** User can create a new password.

Advantages of travel website

- Ultimately, OTAs give you instant access to a **large number of potential customers**. Possible **advantages** of using an online travel agent to sell your service include:
 - It's a low cost way to list your property and its rooms.
 - Reductions in your online marketing spend. OTAs will invest in marketing and advertising to attract potential international customers.
 - A reduction in your website costs. OTAs are keen to provide a positive online experience for customers through good website design and functionality.
 - Online travel sites are popular with customers who like to compare accommodation costs and the services offered by individual providers.
 - Impartial reviews on online travel sites may give new customers the

CONTRIBUTION OF ARYAN RAJ

- For making this project I have studied HTML,CSS and JavaScript.
- For making good travel website I have observed many travel website for good website.
- I have made project report in this project.

CONTRIBUTION OF DIVYA JAIN

- For making this project I have studied HTML,CSS and JavaScript.
- For making good travel website I have observed many travel website for good website.
- I have made webpage in this project.

CONTRIBUTION OF SWAPNIL VERMA

- For making this project I have studied HTML,CSS and JavaScript.
- For making good travel website I have observed many travel website for good website.
- I have made video explanation in this project.
