INTRODUCTION TO THE PROJECT

The Tours and Travel Management System is a web based application. The main purpose of "Tours and travels management system " is to provide a convenient way for a customer to book hotels, flight, train and bus for tour purposes. The objective of this project is to develop a system that automates the processes and activities of a travel agency. In this project, We will make an easier task of searching places and for booking train, flight or bus. . In the present system a customer has to approach various agencies to find details of places and to book tickets. This often requires a lot of time and effort. We provide approach skills to critically examine how a tourist visits and its ability to operate in an appropriate way when dealing with the consequences of tourism, locally, regionally, and nationally including visitor security and ecological influences. It is tedious for a customer to plan a particular journey and have it executed properly. The project 'Tours and Travels Management System' is developed to replace the currently existing system, which helps in keeping records of the customer details of destination as well as payment received.

Though "travel" might seem like a relatively straightforward category, there are tons of different types of sites that fall under this umbrella.

And the design elements you need depend on the type of site you're running.

After all, the goals of an official tourism site for a city or country are very different from those of a travel blogger or tour company.

So as you read through this post, keep in mind that not all of the recommendations will apply to your site.

Each design element is intended to accomplish a specific goal. It's up to you to know what your goals are, then use that information to make informed decisions about each page on your site.

But in general, the ideal travel website should include a mix of the following:

- High-quality photography
- A brief summary of the area, with highlights of important places
- Hotel recommendations with web links to hotel and booking sites
- Information about recreation and outdoor activities
- Guides to arts and culture, including museums, theaters, and other attractions
- Packing tips
- Maps and guides
- Public transport information
- Airport information

- Relevant tips on language and local dialect
  Of course, your site likely won't need to include all of the elements on this list.
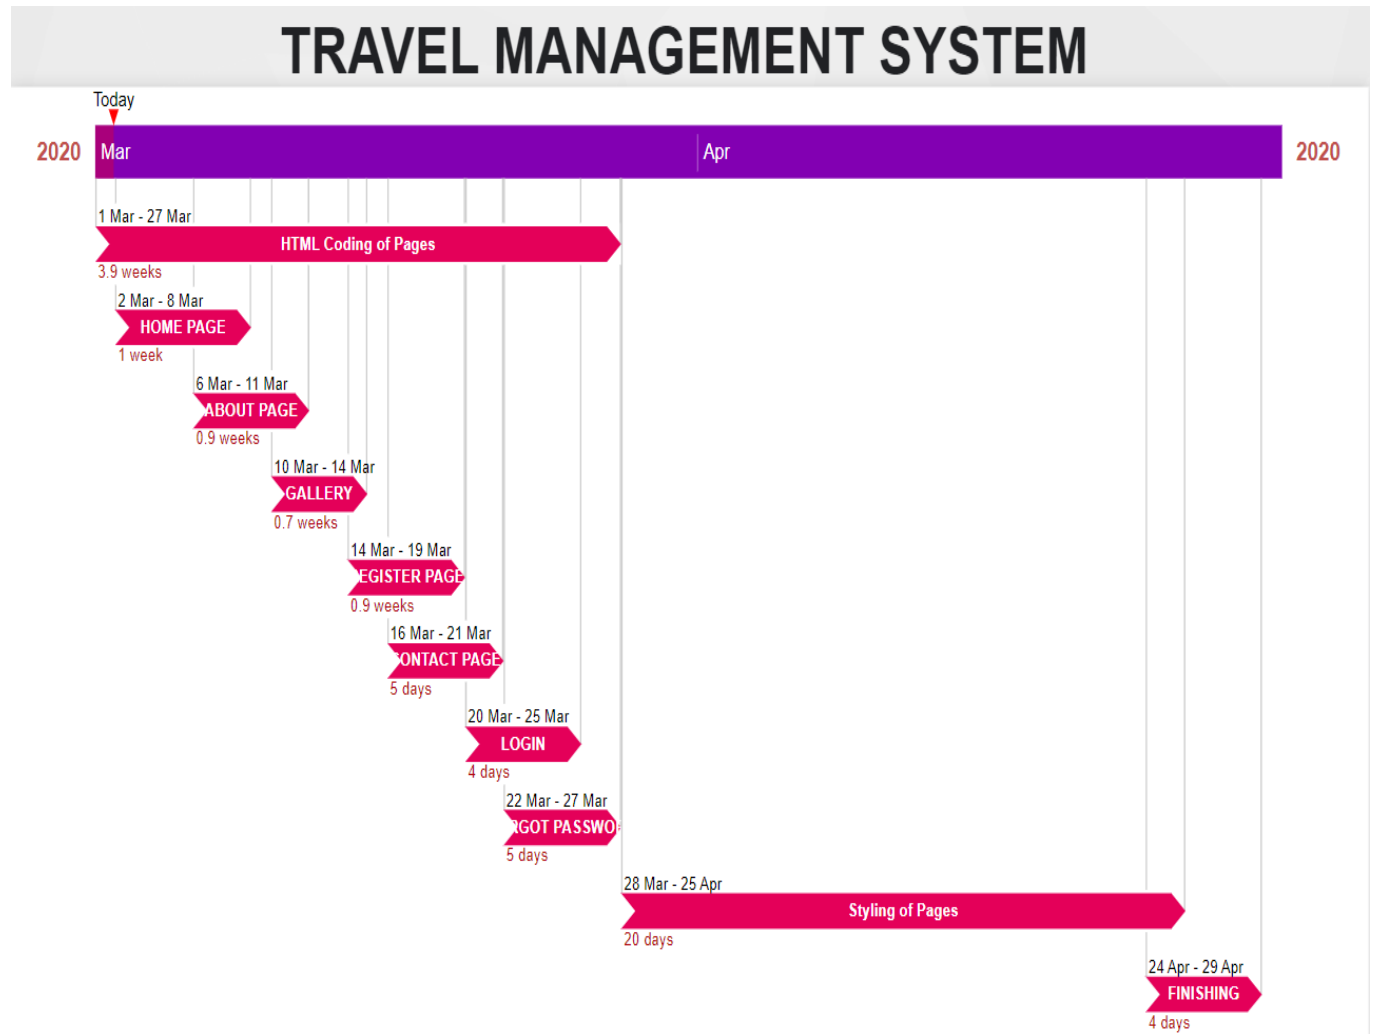

OBJECTIVE OF THE PROJECT

This application is develop to provide best travelling services to the customers and travel agents. We have developed tours and travel management system to provide a search platform where a tourist can find their tour places according to their choices. This system also helps to promote responsible and interesting tourism so that people can enjoy their holidays at their favorable places. This system also helps to develop tourism with different cultures so that they enrich the tourism experience and build pride. We develop this system to create and promote forms of tourism that provide healthy interaction opportunities for tourists and locals and increase better understanding of different cultures, customs, lifestyles, traditional knowledge and believes. This system also provide a better way to connect with various events.

This system also gives tours related information like which places are tourist attractions, cities, and provinces. Tourist can also get the Map and navigation system and temperature and weather information. Tourist can also book tours through our tours and travels management system. This system also keeps a history of visited places of its users.

- Home page: This project contains the basic information about the Travel System.

- About Page: It contains all about the travel system information and their working

- Gallery Page: This page contains all images about travel management

- Register Page: Here Users can easily register on the travel website and confirmation message will be displayed after registering

- Contact Page: User can submit their contact details on the travel website.

- Login: User can log in on the travel website.

- Forgot password: User can create a new password.
